| | | |
|----|---|--|
| 8 | Correction Number CP-1522 | |
| 9 | Log Summary: Order is not significant for subordinate measurement templates | |
| 10 | Name of Standard | |
| 11 | PS3.16 | |
| 12 | Rationale for Correction: | |
| 13 | When CP 1112 introduced ROI measurement templates, it specified the order of content items as being significant rather than | |
| 14 | non-significant. This was not corrected by CP 1386, which added root templates that make use of the subordinate templates, even | |
| 15 | though the root and related templates specify order as non-significant. It is not useful to have significance of the content item order | |
| 16 | in the subordinate templates, nor is there any semantic reason for significance of the order, since the content item meaning is not | |
| 17 | dependent on the order nor is it significant for rendering or analysis. | |
| 18 | Correction Wording: | |

Amend DICOM PS 3.16 as follows:

TID 1410 Planar ROI Measurements

This Template provides a general structure to report one or more measurements for some metric, e.g., density, flow, or concentration, over a planar region of interest in an image. The ROI may be specified by an SCOOD on an image, or by a Segmentation Image.

Type: Extensible
Order: Non-Significant
Root: No

TID 1411 Volumetric ROI Measurements

This Template provides a general structure to report one or more measurements for some metric, e.g., density, flow, or concentration, over a volumetric region of interest in a set of images or a Frame of Reference. The volumetric ROI may be specified by a set of SCOODs on an image set representing a volume, by a volumetric Segmentation Image, by a volume defined in a Surface Segmentation, or by a SCOOD3D.

Type: Extensible
Order: Non-Significant
Root: No

TID 1419 ROI Measurements

This Template encodes measurements for some metric, e.g., density, flow, or concentration.

Type: Extensible
Order: Non-Significant
Root: No
