Correction Number: CP1906

Log Summary: Add Laterality to Treatment Site Code

Name of Standard: PS 3.16 2019d

Rationale for Correction:
The C.36.5 RT Physician Intent Module contains a coded description of the site to treat with Radiotherapy. However, a definition of the laterality is missing. This is especially useful when laterality-specific codes of the treatment site are not available respectively may not be used in a certain context in favor of specifying the laterality separately.

A coded description of the laterality is added.

Correction Wording:

In PS 3.3, add the following to Table C.36.5-1. RT Physician Intent Module Attributes

**C.36.5 RT Physician Intent Module**

The RT Physician Intent Module contains information about the overall intent of the treatment. The content is mostly descriptive text and allows for the presence of unstructured advice by the physician along the established nomenclature of the actual institution.

**Table C.36.5-1. RT Physician Intent Module Attributes**

In PS 3.3, add the following to Table C.36.8-1. RT Segment Annotation Module Attributes

C.36.8 RT Segment Annotation Module

The RT Segment Annotation Module references segments and provides radiotherapy-specific annotations for them. The geometry of each segment is defined by a referenced Segmentation, Surface Segmentation, RT Structure Set or any other general-purpose Instance that represents geometric information.

The values of the following Attribute shall take precedence over values in the referenced SOP Instances:

- Segment Annotation Category Code Sequence (3010,002B)
- Segment Annotation Type Code Sequence (3010,002C)

Table C.36.8-1. RT Segment Annotation Module Attributes
