**CID 5000 Languages**

Context Group ID 5000 comprises the language tag coding scheme of [RFC 5646]. The Coding Scheme Designator (0008,0102) shall be RFC5646.

**Note**

1. The [RFC 5646] coding scheme is constructed from a primary subtag component encoded using the shortest language codes of [ISO 639], plus codes for extensions for languages not represented in [ISO 639]. The code optionally includes additional subtag components, for scripts encoded using the four letter codes of [ISO 15924], and for regions encoded using the two letter country codes of [ISO 3166].

2. [RFC 5646] may be obtained at http://www.ietf.org/rfc/rfc5646.txt. [RFC 5646] obsoletes [RFC 4646], [RFC 3066] and [RFC 1766], but is forward compatible with those specifications. In previous editions of the Standard, [RFC 4646] codes were used with a Coding Scheme Designator of IETF4646. [RFC 5646] is a superset of [RFC 4646], which formalizes support for [ISO 639-3].

4. The two letter country codes of [ISO 3166] may be obtained at http://www.iso.org/obp/ui/#search/code/

5. IANA language tag registrations may be obtained at http://www.iana.org/assignments/language-subtag-registry/language-subtag-registry

6. In previous editions of the Standard, this Context Group formerly included the three letter language codes of [ISO 639-2]/B, using Coding Scheme Designator ISO639_2, or the language codes of [RFC 3066], using Coding Scheme Designator RFC3066, and several IANA-registered language code extensions, using Coding Scheme Designator IANARFC1766.

7. In previous editions of the Standard, this Context Group provided only language identifiers, with national or regional variant identified in a separate attribute or Content Item.

**CID 5001 Countries**

Context Group ID 5001 comprises the two letter country code scheme of ISO 3166. The Coding Scheme Designator (0008,0102) shall be ISO3166_1.

**Note**

The two letter country codes of ISO 3166 may be obtained at http://www.iso.org/obp/ui/#search/code/
CID 5002 Organizations

Context Group ID 5002 comprises the object identifier scheme of ISO 8824-1 and ISO 9834-1, when applied to organizational identifiers (see Section 8.2). The Coding Scheme Designator (0008,0102) shall be ISO_OID.

</tr>
</tbody>
</table>

Note

1. Spatial Collocation Analysis is used to identify features that are the same or located in the same place.
2. Spatial Proximity Analysis is used to identify features that are related spatially, such as nipple retraction associated with a spiculated mass.

**Note**

1. In a prior version of this Context Group, the code P1-03115 was specified for the concept “Ultrasound guided biopsy”. The use of this code is too restrictive, and its use in this context is deprecated. There is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use.

2. The incorrect code P1-43850 was previously used for mastectomy, presumably a two-character transposition of the actual SNOMED concept (P1-48350, SRT, "Mastectomy"); since the correct SNOMED concept is inactive (has a ConceptStatus in SNOMED of ambiguous) and there is no replacement, the corresponding UMLS concept (which maps to multiple coding schemes) is used instead. Currently SNOMED contains a more generic parent concept "Excision of breast tissue", which includes procedures that are less than a mastectomy, e.g., "excisional biopsy of breast", and only specific types of mastectomy, e.g., "simple mastectomy" or "mastectomy of left breast".

**Note**

In a prior version of this Context Group the code T-48500 rather than T-48581 was defined for the concept Pulmonary Vein; this was inconsistent with the DICOM approach of selecting the "structure of" rather than "entire" concept. Although there is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use, receiving applications should be aware of this change; see Annex J.

<td>C1708760</td>
<td>Nadir</td>
</tr>
</tbody>
</table>

**Note**

1. `(C1442488, UMLS, "Baseline")` is `(C25213, NCIt, "Baseline")`. The undefined `(121079, DCM, "Baseline")` that is used in CID 7003 Diagnostic Imaging Report Purposes of Reference is not used in this context.
2. `(C3539075, UMLS, "Pretreatment")` is `(C103341, NCIt, "Pretreatment")`.
3. `(C1708760, UMLS, "Nadir")` is `(C43517, NCIt, "Nadir")`, and is a synonym for "lowest", though "nadir" is more commonly used in the context of therapeutic response criteria.

Note

The use of (111176, DCM, "Unspecified") was previously included in this context group but was removed since it does not make sense to have Colon CAD composite feature modifiers (TID 4125 "Colon CAD Composite Feature") and single image finding modifiers (TID 4127 "Colon CAD Single Image Finding") of an unknown type.

Note

• In previous editions of the Standard, this Context Group included codes of DCMR, using Coding Scheme Designator DCM. The preferable encoding of these concepts is using the LOINC codes, however, the support of equivalent DCMR codes is recommended for backward compatibility.

• In a prior version of this Context Group, the code (18782-3, LN, "Study Observation") was specified for report heading "Findings". This has now been replaced by (59776-5, LN, "Procedure Findings").

CID 7007 Signature Purpose

Context Group ID 7007 comprises the signature purposes codes of ASTM E 2084-00. The Coding Scheme Designator (0008,0102) shall be "ASTM-sigpurpose". The ASTM document defines the signature purpose codes as OIDs. For the purposes of this Coding Scheme only the leaf digit is used as the Code Value (0008,0100).

Note

ASTM E 1762 provides the full definitions for the signature purpose OIDs defined by E 2084. The recommended Code Meanings (0008,0104) are the titles of the definitions for the leaves of the OIDs. For example, the OID 1.2.840.10065.1.12.1 corresponds to the leaf "id-purpose-author", whose meaning could be encoded as "Author Signature" and whose code value is 1.

CID 7008 Media Import

This Context Group specifies items that may be conveyed in the Billing and Materials Management Module (see PS3.3).

CID 7019 Segmentation Non-Image Source Purposes of Reference

Resources: HTML | FHIR JSON | FHIR XML | IHE SVS XML
Type: Extensible
Version: 20170914
UID: 1.2.840.10008.6.1.1183
### CID 7020 Document Titles

Context Group ID 7020 comprises all document names (i.e., terms with Scale "DOC") within the HIPAA Attachments class of the LOINC coding scheme. The Coding Scheme Designator shall be LN.

**Note**

1. A subset of this Context Group directly applicable to imaging reports is in CID 7000 "Diagnostic Imaging Report Document Titles".
2. The LOINC coding scheme can be found at [http://www.regenstrief.org/loinc](http://www.regenstrief.org/loinc).

### CID 7021 Measurement Report Document Titles

**Resources:** HTML | FHIR JSON | FHIR XML | IHE SVS XML

**Type:** Extensible

**Version:** 20141110

**UID:** 1.2.840.10008.6.1.997

#### Table CID 7021. Measurement Report Document Titles

Note

In SNOMED, there is often a choice of unit, department or service concepts; in DICOM, the department concept is preferred and used in this context group.

Note

1. (T-D1400, SRT, "Cranial Cavity") may be used to describe the volume of the entire intra-cranial space (intra-cranial volume or ICV) though the coded concept used is "structure of" rather than "entire" to be consistent with normal DICOM practice.

2. (T-A6040, SRT, "Cerebellar Cortex") is the gray matter of the cerebellum (as distinct from (T-A6080, SRT, "Cerebellar white matter").

3. (T-A1502, SRT, "Cranial Subarachnoid Space") may be used to describe the volume of the exterior CSF (surrounding the brain, excluding the ventricles).

4. (T-A1509, SRT, "Cerebellar Subarachnoid Space") may be used to describe the volume of the inferior intracranial CSF space (infra-tentorial).

CID 7250 Multi-Frame Subset Type

This Context Group specifies the terms used to identify a subset of frames of a multi-frame image. It is used for encoding an equivalent of the Image SOP Instance Reference Macro (see PS3.3) in an HL7 v3 data structure (see HL7 v3 CMET, COCT_RM830120 "A_DicomCompositeObjectReference minimal").

**Note**

Consistent with other concepts in this context group that refer to specific bones or joints, the concept for Elbow has been changed from T-D8300 to T-15430 used in a prior version of this table. Although there is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use, receiving applications should be aware of this change; see Annex J.

Note

1. The distinction between a "physician" and a "surgeon" and a "medical practitioner" is subject to regional variation. In the US, "physician" is often equated with "medical practitioner", and a "surgeon" is considered to be a "physician". In the UK, a "surgeon" is a "medical practitioner" but is not a "physician". In SNOMED, "physician" and "surgeon" are distinct siblings with no direct relationship, and both are children of "medical practitioner". It is recommended that "medical practitioner" be used rather than "physician" when there is uncertainty over whether the person is or is not a "surgeon".
2. There is no distinction between a "radiographer" and a "radiologic technologist", hence the same SNOMED concept is used for both, and "radiologic technologist" is provided as a synonym for use in the US.

3. In the US, the medical practitioner not in training responsible for the care of a hospital patient is referred to as an "attending". In the UK they are referred to as a "consultant". Though these two concepts are essentially the same, they are separate concepts in SNOMED, which defines no explicit relationship between them.

4. A distinction is made between a Consultant and a Consulting Physician since these are separate concepts in UMLS. A Consultant is defined as "individuals referred to for expert or professional advice or services" (MSH) whereas a Consulting Physician is defined as "a physician that has expertise in a specific medical discipline that can offer expertise or advice to other physicians and healthcare providers" (from NCI/PT). In UK practice a "consultant" is always a medical practitioner. In SNOMED, (J-0050A, SRT, "Consultant") is actually described as "Hospital Consultant" and is a child of "Medical practitioner grade (occupation)".

</table>

Note

Codes that are now defined in SNOMED as "ambiguous" (conceptstatus = 4) were previously included in this table, but have been retired and replaced with unambiguous alternatives (e.g., (L-80700, SRT, "Canine species") has been replaced with genus (L-881FC, SRT, "Canis"), species (L-88121, SRT, "Canis lupus") and subspecies (L-88124, SRT, "Canis lupus famil-
iaris”). Note that in UMLS, there is a lack of distinction between “Canis familiaris” and “Canis lupus familiaris”. The replaced codes are (L-85B00, SRT, “homo sapiens”), (L-80A00, SRT, “Feline species”), (L-80400, SRT, “Equine species”), (L-80300, SRT, “Ovine species”), (L-80500, SRT, “Porcine species”), (L-80200, SRT, “Caprine species”), (L-80700, SRT, “Canine species”) and (L-80100, SRT, “Bovine species”).

CID 7455 Sex

This Context Group includes terms for the finding of sex of a subject for clinical purposes, such as selection of sex-based growth metrics.

Table CID 7455. Sex

<table>
<thead>
<tr>

<td>121102</td>
<td>Other sex</td>
<td>O</td>
</tr>
<tr>
<td>DCM</td>
<td>121103</td>
<td>Undetermined sex</td>
<td></td>
</tr>
</tbody>
</table>

Note

1. These terms are distinct from the gender of a subject for administrative purposes, although the default value for clinical sex is often based on the administrative gender (e.g., see TID 1007 “Subject Context, Patient”). The administrative value "O" from Patient's Sex (0010,0040) maps by default to "undetermined" for clinical purposes.

2. This Context Group in a prior edition of the Standard included codes improperly attributed to ISO 5218.

3. These terms are derived from the terminology and codes for sex in ASTM E1633-02a "Standard Specification for Coded Values Used in the Electronic Health Record."

<td>cubic centimeter</td>
</tr>
<tr>
<td>UCUM</td>
<td>mm³</td>
<td>cubic millimeter</td>
</tr>
<tr>
<td>UCUM</td>
<td>um³</td>
<td>cubic micrometer</td>
</tr>
</tbody>
</table>

Note

A "cubic decimeter" is a "liter", just as a "cubic centimeter" is a "milliliter" (of water). Though there are specific units "l" and "ml" in UCUM, only one form is included here, since this context group is intended for use for volume measurements of a physical object derived from one or more images, rather than of fluid volume.

CID 7464 General Region of Interest Measurement Modifiers

This context group contains modifiers of measurements of ROIs.

</table>

Note
1. T-12771 is used in preference to (T-12770, SRT, “Calcaneus”).
2. T-D8600 is used in preference to carpal (wrist) joint.
3. T-11B00 is used in preference to (T-11BF0, SRT, “coccyx”) as used for humans, since the animal possess a tail.
4. T-12800 assumes correspondence between equine hindfoot and human navicular, and T-12450 the equine forefoot navicular and human scaphoid (distal sesamoid).
5. T-12761 is used for the hock joint.
6. In a prior version of this table, the code T-D8300 was used for T-15430. Although there is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use, receiving applications should be aware of this change; see Annex J.

Note

1. The Smallwood et al equivalent may also be used as the Code Meaning (0008,0104) (i.e., as a synonym) in place of the full text described here, and as the value for View Name (0008,2127), if sent.

2. The Defined Terms for View Position are derived from the Smallwood et al equivalent by capitalizing and replacing hyphens with underscores.

1. SNOMED has codes for the corticobulbar and corticospinal tracts and thalamic radiations in specific regions (e.g., internal capsule), but not generic codes independent of their regional location, so they are not used.
2. (T-D0829, SRT, "auditory radiation") is also known as the acoustic raditaion, or geniculotemporal tract.
3. (T-A2880, SRT, "optic radiation") is also known as the geniculo-calcarine tract, geniculostriate pathway or posterior thalamic radiation.

The SLF is distinguished from the AF (even though SNOMED and UMLS treat them as synonymous), per Makris N, et al. "Segmentation of Subcomponents within the Superior Longitudinal Fascicle in Humans: A Quantitative, In Vivo, DT-MRI Study." Cerebral Cortex 15, no. 6 (June 1, 2005): 854-69. doi:10.1093/cercor/bhh186. Hence the SNOMED concept for SLF/AF (T-A2820, 89202009, C0228270) is not used. NeuroNames does not describe the other subcomponents of the SLF than the AF, so DCM codes are assigned.

### CID 8130 Staining Protocols

This Context Group is intended for use in the Scheduled Protocol Code Sequence (0040,0008) and the Performed Protocol Code Sequence (0040,0260) attributes for an automated slide stainer. When so used, an Item with value (P3-00003, SRT, "Staining") will also include a Protocol Context Sequence (0040,0440) using TID 8003 "Specimen Staining" to identify the specific stain substance.

### CID 8131 Pathology Imaging Protocols

This Context Group is intended for use in the Scheduled Protocol Code Sequence (0040,0008) and the Performed Protocol Code Sequence (0040,0260). When so used, an Item with value (112703, DCM, "Whole Slide Imaging") may also include a Protocol Context Sequence (0040,0440) using TID 8010 "Slide Imaging Parameters".

</tr>
</tbody>
</table>

Note

The concept (G-C1C6, SRT, "Quantity"), lacking a formal definition in SNOMED, is assumed in this usage to be synonymous with the concept defined for "quantity" in Joint Committee for Guides in Metrology (JCGM), International Vocabulary of Metrology, Basic and General Concepts and Associated Terms (http://www.bipm.org/utils/common/documents/jcgm/JCGM_200_2012.pdf); the definition is "property of a phenomenon, body, or substance, where the property has a magnitude that can be expressed as a number and a reference". That document further distinguishes a "physical quantity", "chemical quantity", and "biological quantity", though no such distinction is implied here, and "quantity" is assumed to be all inclusive.

</table>

Include CID 3261 “Stress Protocols”

Note

In a prior version of this context group, Transthoracic echocardiography was assigned the code P5-B3003 and Epicardial echocardiography was assigned the code P5-B3004; these codes conflict with other SNOMED code assignments. In addition, the prior version used many codes that are not actually in SNOMED. Receiving applications should be aware of this change, and the possibility of misinterpretation of SOP Instances that may include the deprecated codes; see Annex J.

### CID 12003 OB-GYN Dates

</tbody>
</table>

Include CID 3207 “Stress Test Procedure Phases”

Include CID 12102 “Temporal Periods Relating to Procedure or Therapy”

Note

A prior version of this context group used many codes that are not actually in SNOMED. Although there is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use, receiving applications should be aware of this change; see Annex J.

CID 12015 Fetal Growth Equations and Tables

These terms specify biometric growth parameter of a population distribution as a function of gestational age. The term may also specify the population's distribution, and so enable calculating a percentile rank or Z-score relative to the distribution.

</tbody>
</table>

Note

LN:33183-5 was previously included in this context group with a Code Meaning of "FWP by GA, Hadlock 1991", but is described in LOINC as "Fetal body weight growth percentile estimated from gestational age by method of Campbell 1991 (US)". Devices receiving LN:33183-5 may need to consult the Code Meaning value to determine whether the sender meant Hadlock 1991 or Campbell 1991. New codes have been defined to replace LN:33183-5 to resolve the potential ambiguity.

</table>

Note
1. See Controlled Terminology descriptions in Annex D for manufacturer references.
2. The generic formulation is not used for Code Meaning (0008,0104) because for ultrasonic contrast agents the physical properties of the agent are more significant than chemical formula in determining its acoustic properties.

CID 12300 Core Echo Measurements

This codeset is populated mostly based on measurements identified in best practice articles published by the American Society of Echocardiography (ASE). The LOINC codes were introduced after fully modelling the underlying semantics of the measurement. The Units column contains the proper UCUM representation of the recommended units for the measured property.

Note

The Code Meaning shown here reflects the colloquial style by which the measurements were identified in the ASE articles and would likely be appropriate for displaying to users. However, implementers of clinical applications and databases will need to review the definitions of these measurements to correctly understand the full pre-coordinated semantics of the codes. Similarly, reuse of the codes based on the Code Meaning text without reviewing and confirming the applicability of the full semantics found in the code definitions is discouraged.

**CID 12301 Measurement Selection Reasons**

The codes in this Context Group describe the reason that a value was selected as the preferred value. E.g. (121411, DCM, "Most Recent Value Chosen") means that the value was selected as preferred because the value was the most recent value.

**CID 12306 Echo Flow Directions**

Resources:  HTML | FHIR JSON | FHIR XML | IHE SVS XML
Type: Non-Extensible
Version: 20161109
UID: 1.2.840.10008.1.827.1.1.9

**CID 12306 Cardiac Phases and Time Points**

The following codes are intended for use in a post-coordinated context. For example, the E-wave refers to the period of diastolic rapid inflow as experienced at the post-coordinated finding site, such as the mitral valve or the tricuspid valve.
The table is organized in time sequence based on the start of the coded period.

As indicated in Annex G, the e-prime period used for tissue velocity measurements is synonymous with the E-wave period used for blood velocity measurements.

Content Item Descriptions

Row 2 Glucose Measurement Date
In an earlier edition of the standard, an incorrect DCM code was used for this concept, which was already assigned as (109081, DCM, "Prospective gating").

Row 3 Glucose Measurement Time
In an earlier edition of the standard, an incorrect DCM code was used for this concept, which was already assigned as (109082, DCM, "Retrospective gating").

TID 8001 Specimen Preparation

This Template describes a single specimen preparation step.

**Content Item Descriptions**

**Row 1**
For sampling steps (which create a child specimen from a parent), the ID is that of the child specimen. For other preparation steps, the ID of a specimen does not change during the processing.

**Rows 5, 6**
The issuer shall be formatted in accordance with the HL7v2 Hierarchic Designator Data Type. That format is [Namespace ID]^Universal ID^Universal ID Type, where Namespace ID identifies an entity within the local namespace or domain, Universal ID is a universal or unique identifier for an entity, and Universal ID Type specifies the standard format of the Universal ID (see HL7 v2 Section 2.A.33).

**Content Item Descriptions**

**Rows 5, 6**
The Issuer of Specimen Identifier shall be formatted in accordance with the HL7 v2 Hierarchic Designator data type (see HL7 v2.6 Section 2.A.33), i.e., [Namespace ID]^Universal ID^Universal ID Type.

**Row 5**
Description of coordinate system and origin reference point on parent specimen or parent specimen container used for localizing the sampling site.
Rows 7-9 The X, Y and Z locations are used as needed to describe the sampling site; not all may be needed. E.g., resection from 10 cm along the colon may be described as only a Y dimension location.

Row 10 Reference to image of parent specimen localizing the sampling site; may include referenced Presentation State object

Content Item Descriptions

Row 1 Description of coordinate system and origin reference point used for localizing the Specimen. The value "CURRENT IMAGE" identifies the frame of reference as the pixel space of the Image SOP Instance in which this Content Item occurs.

Row 2 Description of specimen location, either in absolute terms or relative to the Position Frame Reference of Row 1
Rows 3-5 | Location of specimen (nominal center) relative to the Position Frame Reference of Row 1. The Content Items include the units of measurement (e.g., mm). If Row 1 value is "CURRENT IMAGE ", measurement shall be from the top left hand corner of the Pixel Data of the SOP Instance, using units of ((pixel), UCUM, "Pixels").
Row 6 | Reference to image of container localizing the specimen; may include referenced Presentation State object
Row 7 | Reference to Presentation State object for this SOP Instance, with annotations localizing the specimen
Row 8 | Description of visual distinguishing identifiers, e.g., ink, or a particular shape of the specimen

**TID 8010 Slide Imaging Parameters**

This Template describes protocol parameters for a Slide Imaging Procedure Step. As an extensible Template, additional items may be included using other concept names from standard or private coding schemes.

**TID 8200 Radiology Reading Task Parameters**

This Template describes parameters for a radiology reading task.

Note

Specialty to Read is nested inside Modality to Read in order to facilitate C-FIND matching against both Modality and Specialty.

TID 15100 Contrast Agent/Pre-Medication Protocol Context

This Template specifies medications to be administered prior to a diagnostic imaging protocol, imaging contrast agents to be used in the protocol, and/or bolus agents to be used in the protocol. Each medication or agent may be modified by a specified route of administration. The top level Content Items of this Template may appear in any order in the Protocol Context Sequence, hence the order in this Template is not significant. There may be significance in the order in which the Content Items are included in the Protocol Context Sequence, e.g., the requested order in which pre-medications are to be administered.

### Content Item Descriptions

- **Row 13**: Glucose Measurement Date
  - In an earlier edition of the standard, an incorrect DCM code was used for this concept, which was already assigned as (109081, DCM, "Prospective gating").

- **Row 14**: Glucose Measurement Time
  - In an earlier edition of the standard, an incorrect DCM code was used for this concept, which was already assigned as (109082, DCM, "Retrospective gating").

### TID 15200 JJ1017 Protocol Context

This Template defines protocol context concepts to support the requirements of Japanese Guideline JJ1017. This is expected to be used with Scheduled or Performed Protocol Codes from Coding Scheme JJ1017-16M defined in Guideline JJ1017.

- **Type**: Extensible
- **Order**: Significant
- **Root**: No

<tr>
<td>110702</td>
<td>White Matter T2 Hyperintensity</td>
<td>Area(s) of increased intensity on T2 weighted images relative to the surrounding white matter. These may be indicative of age-related or neurodegenerative white matter lesions, and may be co-located with areas of white matter T1 hypointensity, but the concept is specifically confined to the MR appearance on T2 weighted images.</td>
<td></td>
</tr>
</tbody>
</table>
The major component of the SLF, derived from the caudal-inferior parietal region corresponding to the angular gyrus in the human and terminating within the dorsolateral frontal region.

The ventral component of the SLF, originating from the supramarginal gyrus and terminating predominantly in the ventral premotor and prefrontal areas.

White matter that surrounds a lesion of interest. E.g., to identify the otherwise unclassified white matter that surrounds a tumor to be surgically resected.

Signal intensity of a Spin tagging Perfusion MR image. Spin tagging is a technique for the measurement of blood perfusion, based on magnetically labeled arterial blood water as an endogenous tracer.

Signal intensity of a Contrast Agent Angio MR image.

Signal intensity of a Time-of-flight (TOF) MR image. Time-of-flight (TOF) is based on the phenomenon of flow-related enhancement of spins entering into an imaging slice. As a result of being unsaturated, these spins give more signal that surrounding stationary spins.

Signal intensity of a Proton Density Weighted MR image. All MR images have intensity proportional to proton density. Images with very little T1 or T2 weighting are called 'PD-weighted'.

Signal intensity of T1 Weighted MR image. A T1 Weighted MR image is created typically by using short TE and TR times.

Signal intensity of a T2 Weighted MR image. T2 Weighted image contrast state is approached by imaging with a TR long compared to tissue T1 (to reduce T1 contribution to image contrast) and a TE between the longest and shortest tissue T2s of interest.

Signal intensity of a T2* Weighted MR image. The T2* phenomenon results from molecular interactions (spin spin relaxation) and local magnetic field non-uniformities, which cause the protons to precess at slightly different frequencies.

Signal intensity of a Field Map MR image. A Field Map MR image provides a direct measure of the $B_0$ inhomogeneity at each point in the image.

<td>Supplementary Data for Intervention</td>
<td>Supporting evidence for interpretation results of an interventional procedure.</td>
<td></td>
</tr>
<tr>
<td>111464</td>
<td>Procedure Modifier</td>
<td>A descriptor that further qualifies or characterizes a type of procedure.</td>
<td></td>
</tr>
<tr>
<td>111465</td>
<td>Needle Gauge</td>
<td>Needle size (diameter) characterization. E.g., of a biopsy needle.</td>
<td></td>
</tr>
<tr>
<td>111466</td>
<td>Severity of Complication</td>
<td>An indicator of the gravity of a problem experienced by a patient, related to a procedure that was performed.</td>
<td></td>
</tr>
<tr>
<td>111467</td>
<td>Needle Length</td>
<td>Distance from the hub or bushing to the tip of the needle.</td>
<td></td>
</tr>
<tr>
<td>111468</td>
<td>Pathology Results</td>
<td>The collection of observations and findings from pathologic analysis.</td>
<td></td>
</tr>
<tr>
<td>111469</td>
<td>Sampling Date/Time</td>
<td>The date and time that the sample was collected from the patient.</td>
<td></td>
</tr>
<tr>
<td>111470</td>
<td>Uninvolved</td>
<td>Indicates that the margin of the biopsy specimen was not involved with the tumor.</td>
<td></td>
</tr>
<tr>
<td>111471</td>
<td>Involved</td>
<td>Indicates that the margin of the biopsy specimen was involved with the tumor.</td>
<td></td>
</tr>
<tr>
<td>111472</td>
<td>Nipple involved</td>
<td>Indicates whether the nipple was involved in an interventional procedure or pathologic analysis.</td>
<td></td>
</tr>
<tr>
<td>111473</td>
<td>Number of nodes removed</td>
<td>Indicates the number of lymph nodes removed.</td>
<td></td>
</tr>
<tr>
<td>111474</td>
<td>Number of nodes positive</td>
<td>Indicates the number of lymph nodes removed that contain cancer cells.</td>
<td></td>
</tr>
<tr>
<td>111475</td>
<td>Estrogen receptor</td>
<td>The result of a test for the presence of a protein that binds with estrogen.</td>
<td></td>
</tr>
<tr>
<td>111476</td>
<td>Progesterone receptor</td>
<td>The result of a test for the presence of a protein that binds with progesterone.</td>
<td></td>
</tr>
<tr>
<td>111477</td>
<td>S Phase</td>
<td>Indicates the percentage of cells in S phase. Cell division is defined by phases; the S phase is the stage during which DNA replicates.</td>
<td></td>
</tr>
<tr>
<td>111478</td>
<td>Non-bloody discharge (from nipple)</td>
<td>The visible emission of non-bloody fluid from the nipple.</td>
<td></td>
</tr>
<tr>
<td>111479</td>
<td>Difficult physical/clinical examination</td>
<td>The inability to discern normal versus abnormal breast tissue during palpation.</td>
<td></td>
</tr>
<tr>
<td>111480</td>
<td>Cancer elsewhere</td>
<td>An indication that a patient has or had a malignant occurrence in an area of the body other than the breast.</td>
<td></td>
</tr>
<tr>
<td>111481</td>
<td>Saline implant</td>
<td>A salt water filled prosthetic device implanted in the breast.</td>
<td></td>
</tr>
<tr>
<td>111482</td>
<td>Polyurethane implant</td>
<td>A polymer based (plastic) prosthetic device implanted in the breast.</td>
<td></td>
</tr>
<tr>
<td>111483</td>
<td>Percutaneous silicone injection</td>
<td>The introduction of polymeric organic silicon based material through the skin, as for breast augmentation or reconstruction.</td>
<td></td>
</tr>
<tr>
<td>111484</td>
<td>Combination implant</td>
<td>A prosthetic device that contains more than one material implanted in the breast.</td>
<td></td>
</tr>

<td></td>
</tr>
</tbody>
</table>
A test started as two level screening test. In the course of the test, the threshold of relative defects and/or normal test locations has been quantified using the dynamic threshold strategy.

A test started as two level screening test. In the course of the test, the threshold of relative defects and/or normal test locations has been quantified using the normal full threshold strategy.

Takes neighborhood test point results into account and offers stimuli with an adapted value to save time.

Continuous Luminance Incremental Perimetry, which measures at first the individual reaction time of the patient and threshold values in every quadrant. The starting value for the main test is slightly below in individual threshold.

A supra threshold screening strategy. The starting stimuli intensities depend on the classification of the patient's visual hill by measuring the central (fovea) or peripheral (15° meridian) threshold. The result of each dot slightly underestimates the sensitivity value (within 5 dB).

Mode for determining the starting luminance for screening test points - the starting luminance s is chosen based on the age of the patient.

Mode for determining the starting luminance for screening test points - the starting luminance is chosen based on the results of thresholding a set of "primary" test points (one in each quadrant).

Mode for determining the starting luminance for screening test points - in this case, all starting luminance is set to the same value.

Mode for determining the starting luminance for screening test points - the starting luminance is chosen based on the result of the foveal threshold value.

Mode for determining the starting luminance for screening test points - the starting luminance is chosen based on the result of four threshold values measured near the 15° meridian (one in each quadrant).

Real time evaluation of the camera image to recognize blinks and fixation losses with influence on the test procedure. Blinks that interfere with stimuli presentation cause the automated repetition of such stimulus presentations. Fixation losses can be used to delay the stimulus presentation until correct fixation is regained.

A method of monitoring the patient's fixation by periodically presenting stimulus in a location on the background surface that corresponds to the patient's blind spot.

A method of monitoring the patient's fixation by presenting the stimulus to the patient's macula.

A method of monitoring the patient's fixation by observation from the examiner of the patient.

Analysis Results are outside normal limits.

<tr>
<td>112058</td>
<td>Calcium score</td>
<td>A measure often arrived at through calculation of findings from CT examination, which is a common predictor of significant stenosis of the coronary arteries.</td>
<td></td>
</tr>
<tr>
<td>112059</td>
<td>Primary complex</td>
<td>The combination of a focus of pneumonia due to a primary infection with granulomas in the draining hilar or mediastinal lymph nodes [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112060</td>
<td>Oligemia</td>
<td>General or local decrease in the apparent width of visible pulmonary vessels, suggesting less than normal blood flow (reduced blood flow) [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112061</td>
<td>Abnormal lines (1D)</td>
<td>Linear opacity of very fine width, i.e., a nearly one dimensional opacity.</td>
<td></td>
</tr>
<tr>
<td>112062</td>
<td>Abnormal lucency</td>
<td>Area of abnormal very low X-Ray attenuation, typically lower than aerated lung when occurring in or projecting over lung, or lower than soft tissue when occurring in or projecting over soft tissue.</td>
<td></td>
</tr>
<tr>
<td>112063</td>
<td>Abnormal calcifications</td>
<td>A calcific opacity within the lung that may be organized, but does not display the trabecular organization of true bone [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112064</td>
<td>Abnormal texture</td>
<td>Relatively homogeneous, extended, pattern of abnormal opacity in the lung, typically low in contrast.</td>
<td></td>

</tr>
<tr>
<td>112065</td>
<td>Reticulonodular pattern</td>
<td>A collection of innumerable small, linear, and nodular opacities that together produce a composite appearance resembling a net with small superimposed nodules. The reticular and nodular elements are dimensionally of similar magnitude [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112066</td>
<td>Beaded septum sign</td>
<td>Irregular septal thickening that suggests the appearance of a row of beads; usually a sign of lymphangitic carcinomatosis, but may also occur rarely in sarcoidosis [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112067</td>
<td>Nodular pattern</td>
<td>A collection of innumerable, small discrete opacities ranging in diameter from 2-10 mm, generally uniform in size and widespread in distribution, and without marginal spiculation [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112068</td>
<td>Pseudoplaque</td>
<td>An irregular band of peripheral pulmonary opacity adjacent to visceral pleura that simulates the appearance of a pleural plaque and is formed by coalescence of small nodules [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112069</td>
<td>Signet-ring sign</td>
<td>A ring of opacities (usually representing a dilated, thick-walled bronchus) in association with a smaller, round, soft tissue opacity (the adjacent pulmonary artery) suggesting a “signet ring” [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112070</td>
<td>Air bronchiogram</td>
<td>Equivalent of air bronchogram, but in airways assumed to be bronchioles because of peripheral location and diameter [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112071</td>
<td>Air bronchogram</td>
<td>Radiographic shadow of an air-containing bronchus; presumed to represent an air-containing segment of the bronchial tree (identity often inferred) [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112072</td>
<td>Air crescent</td>
<td>Air in a crescentic shape in a nodule or mass, in which the air separates the outer wall of the lesion from an inner sequestrum, which most commonly is a fungus ball of Aspergillus species [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112073</td>
<td>Halo sign</td>
<td>Ground-glass opacity surrounding the circumference of a nodule or mass. May be a sign of invasive aspergillosis or hemorrhage of various causes [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112074</td>
<td>Target Lesion at Baseline</td>
<td>Flag denoting that this lesion was identified, at baseline, as a target lesion intended for tracking over time [RECIST].</td>
<td></td>
</tr>
<tr>
<td>112075</td>
<td>Non-Target Lesion at Baseline</td>
<td>Flag denoting that this lesion was not identified, at baseline, as a target lesion, and was not intended for tracking over time [RECIST].</td>
<td></td>
</tr>
<tr>
<td>112076</td>
<td>Non-Lesion at Baseline</td>
<td>Flag denoting that this finding was identified, at baseline, as a category other than a lesion, and was not intended for tracking over time [RECIST].</td>
<td></td>
</tr>
<tr>
<td>112077</td>
<td>Vasoconstriction</td>
<td>Local or general reduction in the caliber of visible pulmonary vessels, presumed to result from decreased flow occasioned by contraction of muscular pulmonary arteries [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112078</td>
<td>Vasodilation</td>
<td>Local or general increase in the width of visible pulmonary vessels resulting from increased pulmonary blood flow [Fraser and Pare].</td>
<td></td>

<tr>
<td>112079</td>
<td>Architectural distortion</td>
<td>A manifestation of lung disease in which bronchi, pulmonary vessels, a fissure or fissures, or septa of secondary pulmonary lobules are abnormally displaced [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112080</td>
<td>Mosaic perfusion</td>
<td>A patchwork of regions of varied attenuation, interpreted as secondary to regional differences in perfusion [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112081</td>
<td>Pleonemia</td>
<td>Increased blood flow to the lungs or a portion thereof, manifested by a general or local increase in the width of visible pulmonary vessels [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112082</td>
<td>Interface</td>
<td>The common boundary between the shadows of two juxtaposed structures or tissues of different texture or opacity (edge, border) [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112083</td>
<td>Line</td>
<td>A longitudinal opacity no greater than 2 mm in width [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112084</td>
<td>Lucency</td>
<td>The shadow of an absorber that attenuates the primary X-Ray beam less effectively than do surrounding absorbers. In a radiograph, any circumscribed area that appears more nearly black (of greater photometric density) than its surround [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112085</td>
<td>Midlung window</td>
<td>A midlung region, characterized by the absence of large blood vessels and by a paucity of small blood vessels, that corresponds to the minor fissure and adjacent peripheral lung [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112086</td>
<td>Carina angle</td>
<td>The angle formed by the right and left main bronchi at the tracheal bifurcation [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112087</td>
<td>Centrilobular structures</td>
<td>The pulmonary artery and its immediate branches in a secondary lobule; HRCT depicts these vessels in certain cases; a.k.a. core structures or lobular core structures [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112088</td>
<td>Anterior junction line</td>
<td>A vertically oriented linear or curvilinear opacity approximately 1-2 mm wide, commonly projected on the tracheal air shadow [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112089</td>
<td>Posterior junction line</td>
<td>A vertically oriented, linear or curvilinear opacity approximately 2 mm wide, commonly projected on the tracheal air shadow, and usually slightly concave to the right [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112090</td>
<td>Azygosophageal recess interface</td>
<td>A space in the right side of the mediastinum into which the medial edge of the right lower lobe extends [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112091</td>
<td>Paraspinal line</td>
<td>A vertically oriented interface usually seen in a frontal chest radiograph to the left of the thoracic vertebral column [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112092</td>
<td>Posterior tracheal stripe</td>
<td>A vertically oriented linear opacity ranging in width from 2-5 mm, extending from the thoracic inlet to the bifurcation of the trachea, and visible only on lateral radiographs of the chest [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112093</td>
<td>Right tracheal stripe</td>
<td>A vertically oriented linear opacity approximately 2-3 mm wide extending from the thoracic inlet to the right tracheobronchial angle [Fraser and Pare].</td>
<td></td>

<td>112094</td>
<td>Stripe</td>
<td>A longitudinal composite opacity measuring 2-5 mm in width; acceptable when limited to anatomic structures within the mediastinum [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112095</td>
<td>Hiatus</td>
<td>A gap or passage through an anatomic part or organ; especially: a gap through which another part or organ passes.</td>
<td></td>
</tr>
<tr>
<td>112096</td>
<td>Rib Scalene Tubercle</td>
<td>A small rounded elevation or eminence on the first rib for the attachment of the scalenus anterior.</td>
<td></td>
</tr>
<tr>
<td>112097</td>
<td>Vertebral Intervertebral Notch</td>
<td>A groove that serves for the transmission of the vertebral artery.</td>
<td></td>
</tr>
<tr>
<td>112098</td>
<td>Subscapular Fossa</td>
<td>The concave depression of the anterior surface of the scapula.</td>
<td></td>
</tr>
<tr>
<td>112099</td>
<td>Scapular Spine</td>
<td>A sloping ridge dividing the dorsal surface of the scapula into the supraspinatous fossa (above), and the infraspinatous fossa (below).</td>
<td></td>
</tr>
<tr>
<td>112100</td>
<td>Scapular Supraspinatus Fossa</td>
<td>The portion of the dorsal surface of the scapula above the scapular spine.</td>
<td></td>
</tr>
<tr>
<td>112101</td>
<td>Scapular Infraspinatus Fossa</td>
<td>The portion of the dorsal surface of the scapula below the scapular spine.</td>
<td></td>
</tr>
<tr>
<td>112102</td>
<td>Aortic knob</td>
<td>The portion of the aortic arch that defines the transition between its ascending and descending limbs.</td>
<td></td>
</tr>
<tr>
<td>112103</td>
<td>Arch of the Azygos vein</td>
<td>Section of Azygos vein near the fourth thoracic vertebra, where it arches forward over the root of the right lung, and ends in the superior vena cava, just before that vessel pierces the pericardium.</td>
<td></td>
</tr>
<tr>
<td>112104</td>
<td>Air-fluid level</td>
<td>A local collection of gas and liquid that, when traversed by a horizontal X-Ray beam, creates a shadow characterized by a sharp horizontal interface between gas density above and liquid density below [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112105</td>
<td>Corona radiata</td>
<td>A circumferential pattern of fine linear spicules, approximately 5 mm long, extending outward from the margin of a solitary pulmonary nodule through a zone of relative lucency [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112106</td>
<td>Honeycomb pattern</td>
<td>A number of closely approximated ring shadows representing air spaces 5-10 mm in diameter with walls 2-3 mm thick that resemble a true honeycomb; implies “end-stage” lung [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112107</td>
<td>Fleischner's line(s)</td>
<td>A straight, curved, or irregular linear opacity that is visible in multiple projections; usually situated in the lower half of the lung; vary markedly in length and width [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112108</td>
<td>Intralobular lines</td>
<td>Fine linear opacities present in a lobule when the intralobular interstitium is thickened. When numerous, they may appear as a fine reticular pattern [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112109</td>
<td>Kerley A line</td>
<td>Essentially straight linear opacity 2-6 cm in length and 1-3 mm in width, usually in an upper lung zone [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112110</td>
<td>Kerley B line</td>
<td>A straight linear opacity 1.5-2 cm in length and 1.2 mm in width, usually at the lung base [Fraser and Pare].</td>
<td></td>
</tr>

<tr>
<td>112111</td>
<td>Kerley C lines</td>
<td>A group of branching, linear opacities producing the appearing of a fine net, at the lung base [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112112</td>
<td>Parenchymal band</td>
<td>Elongated opacity, usually several millimeters wide and up to about 5 cm long, often extending to the pleura, which may be thickened and retracted at the site of contact [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112113</td>
<td>Reticular pattern</td>
<td>A collection of innumerable small linear opacities that together produce an appearance resembling a net [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112114</td>
<td>Septal line(s)</td>
<td>Usually used in the plural, a generic term for linear opacities of varied distribution produced when the interstitium between pulmonary lobules is thickened [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112115</td>
<td>Subpleural line</td>
<td>A thin curvilinear opacity, a few millimeters or less in thickness, usually less than 1 cm from the pleural surface and paralleling the pleura [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112116</td>
<td>Tramline shadow</td>
<td>Parallel or slightly convergent linear opacities that suggest the planar projection of tubular structures and that correspond in location and orientation to elements of the bronchial tree [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112117</td>
<td>Tubular shadow</td>
<td>Paired, parallel, or slightly convergent linear opacities presumed to represent the walls of a tubular structure seen en face; used if the anatomic nature of a shadow is obscure [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112118</td>
<td>Density</td>
<td>The opacity of a radiographic shadow to visible light; film blackening; the term should never be used to mean an &quot;opacity&quot; or &quot;radiopacity&quot; [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112119</td>
<td>Dependent opacity</td>
<td>Subpleural increased attenuation in dependent lung. The increased attenuation disappears when the region of lung is nondependent; a.k.a. dependent increased attenuation [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112120</td>
<td>Ground glass opacity</td>
<td>Hazy increased attenuation of lung, but with preservation of bronchial and vascular margins; caused by partial filling of air spaces, interstitial thickening, partial collapse of alveoli, normal expiration, or increased capillary blood volume [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112121</td>
<td>Infiltrate</td>
<td>Any ill-defined opacity in the lung [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112122</td>
<td>Micronodule</td>
<td>Discrete, small, round, focal opacity of at least soft tissue attenuation and with a diameter no greater than 7 mm [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112123</td>
<td>Phantom tumor (pseudotumor)</td>
<td>A shadow produced by a local collection of fluid in one of the interlobar fissures, usually elliptic in one radiographic projection and rounded in the other, resembling a tumor [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112124</td>
<td>Shadow</td>
<td>Any perceptible discontinuity in film blackening attributed to the attenuation of the X-Ray beam by a specific anatomic absorber or lesion on or within the body of the patient; to be employed only when more specific identification is not possible [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112125</td>
<td>Small irregular opacities</td>
<td>Term used to define a reticular pattern specific to pneumoconioses [Fraser and Pare].</td>
<td></td>
</tr>

<td>112126</td>
<td>Small rounded opacities</td>
<td>Term used to define a nodular pattern specific to pneumoconioses [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112127</td>
<td>Tree-in-bud sign</td>
<td>Nodular dilation of centrilobular branching structures that resembles a budding tree and represents exudative bronchiolar dilation [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112128</td>
<td>Granular pattern</td>
<td>Any extended, finely granular pattern of pulmonary opacity within which normal anatomic details are partly obscured [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112129</td>
<td>Miliary pattern</td>
<td>A collection of tiny discrete opacities in the lungs, each measuring 2 mm or less in diameter, generally uniform in size and widespread in distribution [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112130</td>
<td>Mosaic pattern</td>
<td>Generalized pattern of relatively well defined areas in the lung having different X-Ray attenuations due to a longstanding underlying pulmonary disease.</td>
<td></td>
</tr>
<tr>
<td>112131</td>
<td>Extremely small</td>
<td>A qualitative descriptor of a size that is dramatically less than typical.</td>
<td></td>
</tr>
<tr>
<td>112132</td>
<td>Very small</td>
<td>A qualitative descriptor of a size that is considerably less than typical.</td>
<td></td>
</tr>
<tr>
<td>112133</td>
<td>Too small</td>
<td>A qualitative descriptor of a size that is so small as to be abnormal versus expected size.</td>
<td></td>
</tr>
<tr>
<td>112134</td>
<td>Elliptic</td>
<td>Shaped like an ellipse (oval).</td>
<td></td>
</tr>
<tr>
<td>112135</td>
<td>Lobulated</td>
<td>A border shape that is made up of, provided with, or divided into lobules (small lobes, curved or rounded projections or divisions).</td>
<td></td>
</tr>
<tr>
<td>112136</td>
<td>Spiculated</td>
<td>Radially orientated border shape.</td>
<td></td>
</tr>
<tr>
<td>112137</td>
<td>Sharply defined</td>
<td>The border of a shadow (opacity) is sharply defined [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112138</td>
<td>Distinctly defined</td>
<td>The border of a shadow (opacity) is distinctly defined [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112139</td>
<td>Well demarcated</td>
<td>The border of a shadow (opacity) is well distinct from adjacent structures [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112140</td>
<td>Sharply demarcated</td>
<td>The border of a shadow (opacity) is sharply distinct from adjacent structures [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112141</td>
<td>Poorly demarcated</td>
<td>The border of a shadow (opacity) is poorly distinct from adjacent structures [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112142</td>
<td>Circumscribed</td>
<td>A shadow (opacity) possessing a complete or nearly complete visible border [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112143</td>
<td>Air</td>
<td>Inspired atmospheric gas. The word is sometimes used to describe gas within the body regardless of its composition or site [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112144</td>
<td>Soft tissue</td>
<td>Material having X-Ray attenuation properties similar to muscle.</td>
<td></td>
</tr>
<tr>
<td>112145</td>
<td>Calcium</td>
<td>Material having X-Ray attenuation properties similar to calcium, a silver-white bivalent metallic element occurring in plants and animals.</td>

<td>------------</td>
<td>-------</td>
</tr>
<tr>
<td>112146</td>
<td>Acinar</td>
<td>A pulmonary opacity 4-8 mm in diameter, presumed to represent anatomic acinus, or a collection of opacities in the lung, each measuring 4-8 mm in diameter, and together producing an extended, homogeneous shadow [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112147</td>
<td>Air space</td>
<td>The gas-containing portion of the lung parenchyma, including the acini and excluding the interstitium [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112148</td>
<td>Fibronodular</td>
<td>Sharply defined, approximately circular opacities occurring singly or in clusters, usually in the upper lobes [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112149</td>
<td>Fluffy</td>
<td>A shadow (opacity) that is ill-defined, lacking clear-cut margins [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112150</td>
<td>Linear</td>
<td>A shadow resembling a line; any elongated opacity of approximately uniform width [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112151</td>
<td>Profusion</td>
<td>The number of small opacities per unit area or zone of lung. In the International Labor Organization (ILO) classification of radiographs of the pneumoconioses, the qualifiers 0 through 3 subdivide the profusion into 4 categories. The profusion categories may be further subdivided by employing a 12-point scale [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112152</td>
<td>Silhouette sign</td>
<td>The effacement of an anatomic soft tissue border by either a normal anatomic structure or a pathologic state such as airlessness of adjacent lung or accumulation of fluid in the contiguous pleural space; useful in detecting and localizing an opacity along the axis of the X-Ray beam [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112153</td>
<td>Subpleural</td>
<td>Situated or occurring between the pleura and the body wall.</td>
<td></td>
</tr>
<tr>
<td>112154</td>
<td>Bat's wing distribution</td>
<td>Spatial arrangement of opacities that bears vague resemblance to the shape of a bat in flight; bilaterally symmetric [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112155</td>
<td>Butterfly distribution</td>
<td>Spatial arrangement of opacities that bears vague resemblance to the shape of a butterfly in flight; bilaterally symmetric [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112156</td>
<td>Centrilobular</td>
<td>Referring to the region of the bronchioloarteriolar core of a secondary pulmonary lobule [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112157</td>
<td>Coalescent</td>
<td>The joining together of a number of opacities into a single opacity [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112158</td>
<td>Lobar</td>
<td>Of or relating to a lobe (a curved or rounded projection or division). E.g., involving an entire lobe of the lung.</td>
<td></td>
</tr>
<tr>
<td>112159</td>
<td>Hyper-acute</td>
<td>Extremely or excessively acute, as a qualitative measure of severity.</td>
<td></td>
</tr>
<tr>
<td>112160</td>
<td>Homogeneous (uniform opacity)</td>
<td>Of uniform opacity or texture throughout [Fraser and Pare].</td>
<td></td>
</tr>
<tr>
<td>112161</td>
<td>Inhomogeneous</td>
<td>Lack of homogeneity in opacity or texture.</td>
<td></td>
</tr>
<tr>
<td>112162</td>
<td>Target</td>
<td>Discrete opacity centrally within a larger opacity, as a calcification descriptor.</td>
<td></td>
</tr>
<tr>
<td>112163</td>
<td>Fibrocalcific</td>
<td>Pertaining to sharply defined, linear, and/or nodular opacities containing calcification(s) [Fraser and Pare].</td>
<td></td>

</table>
| 113828     | Pitch Factor | For Spiral scanning: Pitch Factor = (Table Feed per Rotation (mm)) / (Nominal Total Collimation Width (mm))  
For Sequenced scanning: Pitch Factor = (Table Feed per single Sequenced scan (mm)) / (Nominal Total Collimation Width (mm)). | |
| 113829     | CT Dose      | General description of CT dose values. | |
| 113830     | Mean CTDIvol | "Mean CTDIvol" refers to the average value of the CTDIvol associated with this acquisition. | |
| 113831     | CT X-Ray Source Parameters | Identification, tube-potential, tube-current, and exposure-time parameters associated with an X-Ray source during an acquisition. | |
| 113832     | Identification of the X-Ray Source | Identifies the particular X-Ray source (in a multi-source CT system) for which the set of X-Ray source parameter values is reported. | |
| 113833     | Maximum X-Ray Tube Current | Maximum X-Ray tube current. | |
| 113834     | Exposure Time per Rotation | The exposure time for one rotation of the source around the object in s. | |
| 113835     | CTDIw Phantom Type | A label describing the type of phantom used for CTDIW measurement according to IEC 60601-2-44 (Head 16 cm diameter PMMA, Body 32 cm diameter PMMA). | |
| 113836     | CTDIfreeair Calculation Factor | The CTDIfreeair Calculation Factor is the CTDIfreeair per mAs, expressed in units of mGy/mAs. The CTDIfreeair Calculation Factor may be used in one method calculating Dose. | |
| 113837     | Mean CTDIfreeair | The average value of the free-in-air CTDI associated with this acquisition. | |
| 113838     | DLP          | Dose Length Product (DLP), expressed in mGy-cm, is an index characterizing the product of the CTDIvol and the length scanned. For Spiral scanning, DLP = CTDIvol × Scanning Length. For Sequenced scanning, DLP = CTDIvol × Nominal Total Collimation Width × Cumulative Exposure Time / Exposure Time per Rotation. For Stationary and Free scanning, DLP = CTDIvol × Nominal Total Collimation Width. | |
| 113839     | Effective Dose | Effective dose in mSv. | |
| 113840     | Effective Dose Conversion Factor | Effective Dose per DLP, reference value for Effective Dose calculation, expressed in mSv/mGY.cm. | |
| 113841     | ICRP Pub 103 | Effective Dose Reference authority  
<p>| 113842     | X-Ray Modulation Type | The type of exposure modulation used for the purpose of limiting the dose. | |
| 113845     | Exposure Index | Measure of the detector response to radiation in the relevant image region of an image acquired with a digital X-Ray imaging system as defined in IEC 62494-1; see PS3.3 definition of Exposure Index Macro. | |</p>

</tbody>
</table>
The measurement has been normalized by dividing it by an index value (such as Body Surface Area).

The measurement is a change value expressed as a fraction of its baseline value. E.g. cardiac ejection fraction or fractional shortening.

The measurement is calculated by incorporating one or more measured values into an equation other than a ratio, fractional change or indexed calculation.

The measurement is a direct output of the measurement tool.

The distal portion (at the Pulmonic Valve) of the Right Ventricle Outflow Tract.

The proximal portion (subvalvular) of the Right Ventricle Outflow Tract.

The anterior wall of the right ventricle of the heart.

The period of time between the onset of muscle activation and the onset of force or motion.

The period between onset of ventricular contraction and the beginning of antegrade blood flow out of the ventricle.

The period of atrial diastolic filling.

The period of retrograde flow into the pulmonary vein during atrial contraction.

The period of the entire cardiac cycle. E.g. from End Systole of one heartbeat to End Systole of the next heartbeat.

The standard deviation over 12 left ventricle myocardial segments of the time to peak myocardial sustained systolic velocity of each segment.

The effective area of an orifice (such as the mitral valve orifice) during bloodflow through the orifice.

The distance traversed by some tissue over a defined period.

The maximum area of an orifice opening over a defined period.

The peak pressure of blood over a defined period at a defined location.

The peak velocity of some tissue over a defined period

The radius of the proximal isovelocity surface area (PISA) of fluid flow approaching an orifice. It is commonly used to evaluate cardiac valve regurgitation.

A cross-sectional area of a regurgitation jet, taken perpendicular to the primary flow.

A width of a regurgitation jet taken perpendicular to the primary flow.

The width of the vena contracta of a fluid flow.

<td>OCT-A amplitude decorrelation</td>
<td>OCT angiography method that de-correlates the amplitudes between two consecutive B-scans from the narrowed spectral bands was computed, and all the decorrelation values within certain repeated B-scans were averaged to visualize blood vessels. Methods and algorithms for optical coherence tomography-based angiography: a review and comparison. Anqi Zhang; Qin Qin Zhang; Chieh-Li Chen; Ruikang K. Wang (2015). See <a href="http://biomedicaloptics.spiedigitallibrary.org/article.aspx?articleid=2464650#QuantitativeComparisons">http://biomedicaloptics.spiedigitallibrary.org/article.aspx?articleid=2464650#QuantitativeComparisons</a>.</td>
<td></td>
</tr>
<tr>
<td>128253</td>
<td>OCT-A complex variance</td>
<td>OCT angiography method based on variations in the complex (amplitude and phase) OCT signal from repeated B-scans at the same location. There are a number of factors that may cause a change in the OCT signal frequency relative to the signal due to static tissue background. These factors include, for example, the Doppler effect that induces optical frequency shift and the change in backscattering due to the particles that are moving in and out of the OCT-probe volume during imaging. The changes in signal frequency cause the changes in both the amplitude and the phase of the OCT signal. Comparison of the complex (amplitude and phase) signal from repeated B-scans at the same location provides an image that has higher contrast in areas of erythrocyte motion. This method is referred to as OCT-based micro-angiography - complex (OMAGC).</td>

<td>Zone Size Nonuniformity Normalized</td>
<td>The normalized distribution of zone counts over the different zone sizes in a gray level size zone matrix.</td>
<td>The US not UK spelling of &quot;normalized&quot; is used to be consistent with the DICOM convention, rather than the IBSI spelling.</td>
</tr>
<tr>
<td>128833</td>
<td>Zone Percentage</td>
<td>The fraction of the number of realised zones relative to the maximum number of potential zones in a gray level size zone matrix. Abbreviated ZPERC.</td>
<td>See F\textsubscript{szm.zsnu.norm} in [IBSI Features v4].</td>
</tr>
<tr>
<td>128834</td>
<td>Gray Level Variance in Zones</td>
<td>The variance in zone counts for the gray levels in a gray level size zone matrix.</td>
<td>See F\textsubscript{szm.gl.var} in [IBSI Features v4].</td>
</tr>
<tr>
<td>128835</td>
<td>Zone Size Variance</td>
<td>The variance in zone counts for the different zone sizes in a gray level size zone matrix.</td>
<td>See F\textsubscript{szm.zs.var} in [IBSI Features v4].</td>
</tr>
<tr>
<td>128836</td>
<td>Zone Size Entropy</td>
<td>The entropy of zone sizes in a gray level size zone matrix.</td>
<td>See F\textsubscript{szm.zs.entr} in [IBSI Features v4].</td>
</tr>
<tr>
<td>129001</td>
<td>Eligibility Reader</td>
<td>Person who looks at and interprets medical images against defined criteria for the purpose of establishing eligibility of the subject of said images to be enrolled in a research experiment or a clinical trial.</td>
<td></td>
</tr>
<tr>
<td>129002</td>
<td>Designator</td>
<td>Person who designates locations on medical images (such as the location of lesions) for other persons or devices to measure or interpret. E.g., for the purpose of consistent target lesion selection for application of therapeutic response criteria by multiple independent readers.</td>
<td></td>
</tr>
<tr>
<td>129003</td>
<td>Image Quality Controller</td>
<td>Person who reviews medical images to evaluate the compliance of said images with quality criteria.</td>
<td></td>
</tr>
<tr>
<td>129004</td>
<td>Results Quality Controller</td>
<td>Person who reviews results derived from medical images to evaluate the compliance of said results with quality criteria.</td>
<td></td>
</tr>
<tr>
<td>129010</td>
<td>Edited Model</td>
<td>A reference to a predecessor model that has been edited to produce the current model. For example: inclusion of more organs, completion of a partial segmentation, insertion of a bisection plane to allow interior inspection, or addition of support material.</td>
<td></td>
</tr>
<tr>
<td>129011</td>
<td>Component Model</td>
<td>A reference to a predecessor model that contributed to the creation of the current combined model. This includes simple assembly of discrete pieces as well as more complex combination. For example: by Boolean mathematical and similar operations.</td>
<td></td>
</tr>
<tr>
<td>129012</td>
<td>Educational Intent</td>
<td>Intended for educational purposes. For example: patient or care-giver education/informed consent, or training residents and fellows.</td>
<td></td>
</tr>
<tr>
<td>129013</td>
<td>Planning Intent</td>
<td>Intended to be used to assist with procedure planning</td>

<tr>
<td>Code Value</td>
<td>Code Meaning</td>
<td>Definition</td>
<td></td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
</tr>
<tr>
<td>129014</td>
<td>Tool Fabrication</td>
<td>Intended to be used to manufacture a patient-matched tool that is employed during a medical procedure. For example: drill/cutting guides, immobilizers, radiation shields, and plate bending templates.</td>
<td></td>
</tr>
<tr>
<td>129015</td>
<td>Prosthetic Fabrication</td>
<td>Intended to be used to manufacture a fully external prosthetic/orthotic</td>
<td></td>
</tr>
<tr>
<td>129016</td>
<td>Implant Fabrication</td>
<td>Intended to be used to manufacture a wholly or partially internal implant</td>
<td></td>
</tr>
<tr>
<td>129017</td>
<td>Simulation Intent</td>
<td>Intended to be used for simulation and/or practice of a surgery or other medical procedure. &quot;Simulation&quot; is not used for patient-matched simulation, as this would be covered by &quot;Diagnostic Intent&quot; or &quot;Planning Intent&quot;.</td>
<td></td>
</tr>
<tr>
<td>129018</td>
<td>US 3D CAM model</td>
<td>A 3D manufacturing model derived from ultrasound imaging.</td>
<td></td>
</tr>
<tr>
<td>129019</td>
<td>Mixed Modality 3D CAM model</td>
<td>A 3D manufacturing model derived from images from multiple different modalities.</td>
<td></td>
</tr>
<tr>
<td>129020</td>
<td>Photogrammetric Imaging 3D CAM model</td>
<td>A 3D manufacturing model derived from measurements made from photographs.</td>
<td></td>
</tr>
<tr>
<td>129021</td>
<td>Laser Scanning 3D CAM model</td>
<td>A 3D manufacturing model derived from laser scanning measurements.</td>
<td></td>
</tr>

Note

The word-to-word translation of "Fluffy" is "Duveteux", but this term is never used. For tissues, the translation must be "Floconneux" but this term is only used for calcifications (Flocculent = Floconneux) in CID 6132 “Chest Calcification Descriptor”. We retained "Flou" (in English, "Fuzzy") as the most appropriate meaning.

**Note**

1. DAO = Détection Assistée par Ordinateur

2. In (113006, DCM, "For Therapy"), therapy could be translated as "thérapeutique" as well as "traitement". There is an issue with the word "traitement" because it is the same word used for image processing. To avoid any ambiguity we have chosen the word "thérapeutique", which is less used in common language.

Table E-2 provides a mapping of pathology codes used in DICOM, to ADICAP (L'association pour le Développement de l'Informatique en Anatomie et Cytologie Pathologiques).

H Code Meanings of LOINC Codes in DCMR

Code Meanings for LOINC codes may use the LOINC "Long Common Name" for the Code Meaning, or if that is too long for the Value Representation of Code Meaning, or if it is preferred, the LOINC "Short Name" (which will be less than 40 characters), or synonyms as specified in this Annex.

### Code Value | Code Meaning
--- | ---
55115-0 | Request
55281-0 | Number of Fetuses
55752-0 | Clinical Information
73568-8 | Communication of Critical Results
73569-6 | Radiation Exposure and Protection Information
8277-6 | Body Surface Area
8302-2 | Patient Height

**Note**

LN:33183-5 was previously included in this context group with a Code Meaning of "FWP by GA, Hadlock 1991", but is described in LOINC as "Fetal body weight growth percentile estimated from gestational age by method of Campbell 1991 (US)". Devices receiving LN:33183-5 may need to consult the Code Meaning value to determine whether the sender meant Hadlock 1991 or Campbell 1991. New codes have been defined to replace LN:33183-5 to resolve the potential ambiguity.
I Relationship of Endoscopy Procedures to Anatomic Regions (Informative)

Table I-1 provides examples of the common nomenclature for the type of endoscopy performed, and the code value suggested for use for anatomic region in CID 4040 “Endoscopy Anatomic Regions”.

J SNOMED Retired Codes

This Annex identifies coded terms specified in earlier versions of the Standard. These coded terms are retired. Some of the codes conflict with codes defined in SNOMED. Additionally, some SNOMED coded terms specified in earlier versions of the Standard have been retired and replaced by SNOMED to avoid ambiguities in concept, and are noted here as well.

Implementers of the Standard are cautioned that:

• some of the codes noted as retired are still valid (active) SNOMED codes, but with different meanings; it is thus the combination of code and meaning that is retired

• not all of the codes that IHTSDO may have inactivated in any past, current or future SNOMED CT release have yet been retired from DICOM

• some applications may continue to send retired codes with the meaning defined in this Annex

• the retired codes may be associated with coding scheme designator 99SDM, SNM3 or SRT

• retired codes may be encountered in existing SOP Instances stored in archives

• applications receiving SOP Instances should continue to support retired codes with the meaning defined in this Annex

• some applications may not trigger expected behavior (e.g., hanging protocols, image processing) when receiving SOP Instances with the replacement codes

• DICOM applications and SOP Instances shall never use the retired codes with a meaning other than that defined in this Annex

• in some cases, the choice of replacement code for a retired code depends on the context of its use, and so one retired code may map to more than one replacement code

K Relevant Patient Information Templates (Normative)

The following Templates are appropriate to use as Root Templates for the Relevant Patient Information Query Service Class:

- TID 9007 “General Relevant Patient Information”
- TID 9000 “Relevant Patient Information for Breast Imaging”
- TID 9001 “Gynecological History”
- TID 9002 “Medication, Substance, Environmental Exposure”
- TID 9003 “Previous Procedure”
- TID 9004 “Indicated Problem”
- TID 9005 “Risk Factor”
- TID 9006 “Obstetric History”
- TID 3802 “Cardiovascular Patient History”
L Correspondence of Anatomic Region Codes and Body Part Examined Defined Terms

This Annex defines a correspondence between the codes used in context groups for Anatomic Region Sequence (0008,2218) and Body Part Examined (0018,0015), as well as providing a list of the Defined Terms for Body Part Examined (0018,0015), for human use in Table L-1 and for large animal use in Table L-2 and for small animal use in Table L-3. In addition, Table L-5 summarizes whether or not selected anatomic concepts need a laterality modifier (as opposed to being unpaired, or already incorporating laterality as a precoordinated concept).

Note

1. The tables in this Annex contain the union of a large variety of codes suitable for different applications and modalities, including cross-sectional, projectional and visible light. As such, only a subset will be appropriate for any specific application.

2. Values for Body Part Examined are limited by the CS VR length restriction to 16 characters in length and hence are somewhat contrived. Some inconsistency in abbreviations may be apparent but this largely reflects historical usage or clinically well recognized usage. No spaces or underscores are used, and singular rather than plural forms are used.

Note

The NCI Thesaurus codes were then used to look up corresponding concepts in UMLS, from which SNOMED and FMA codes were extracted automatically (and various conflicts and ambiguities resolved manually). The same correspondence to existing Body Part Examined values is used as in other tables in this Annex.

Another mapping project using the FMA as a reference ontology was not used, since the files were not available. See Zhang S, Bodenreider O. Alignment of Multiple Ontologies of Anatomy: Deriving Indirect Mappings from Direct Mappings to a Reference. AMIA Annual Symposium Proceedings 2005;2005:864-868 http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1560629/.
## Table L-4. Correspondence between Animal-specific and Generic NCI Thesaurus Codes

Note

For the mouse, NCIt contains some duplicate anatomical concepts, including those which have been marked inactive and appear to have been replaced with improved codes for the "Mouse Models of Human Cancers Consortium" (MMHCC). Whenever duplicates were found, the MMHCC concept has been used in this table.

This table was produced by searching NCIt for all concepts that had "mouse" or "rat" in their concept name or synonyms, and then using that synonym with the word "mouse" or "rat" removed, to match against generic concept names.

The NCI Thesaurus codes were then used to look up corresponding concepts in UMLS, though not all of the concepts are included in UMLS yet (especially the MMHCC concepts).

N Externally Defined Value Sets (Informative)

This annex identifies those Value Sets defined externally to the DICOM Standard that are referenced by the Standard. These value sets are reproduced here for reference only, and might not be the current version.

These value sets use codes from various coding schemes or code systems, as identified in Section 8.

N.1 HL7 Value Sets

HL7 Value Sets are reproduced with the permission of HL7 International. For the current version of HL7 Value Sets, see the HL7v3 Normative Edition (http://www.hl7.org/implement/standards/product_brief.cfm?product_id=186).
