

**DICOM WG-24, Surgery discussion**  
**June 26, 8:00AM**  
**Meeting virtually at CARS in Europe**

Attendees

Oliver Burgert  
Lenny Berliner  
Hoersaal  
Ron Schilling

1. Antitrust statement

2. Welcome, roll call

3. Potential work item topics, items to start :

Says reasons to start again- surgical navigation, AR, etc.

Example:

Cross-standard interoperability

Discuss a new structure, team, chair, etc.

4. Questions:

**Feedback during presentation:** DICOM is hard to learn/apply as an engineer. The person that asked the question was a surgeon.

To start back up, talk to companies. Try to compile a group working on interactive, mixed reality. Lots of application of that in the surgical reality.

Two use cases: More academic. Surgical navigation, interactive, mixed reality. (GE is working on catheters). Eco being the driver.

Potential work items. Continue WG-24. Define the chair, co-chair, etc. Set up a call- Oliver, Ron, Lenny, and Heinz.

Likely MITA/DICOM as the Secretariat for the time being.

**Follow up meeting-IHE surgery, DICOM workshop**

Would like to discuss this. Interactive-approaches for DICOM and this type of technology. 3D presentation state.

**Action:** Ms. Hull to set up a meeting.
