

DICOM Correction Item

Correction Number		CP-648
Log Summary: Additional anatomic region codes for CT and MR		
Type of Modification	Name of Standard	
Clarification	PS 3.16 2006	
<p>Rationale for Correction</p> <p>There are some important anatomic region codes that were not included in the original enhanced object supplements (like Brain for CT and MR !).</p> <p>Also, the use of “,NOS” should be removed from context group (2) used by older IODs, and the commonality with other context groups factored out, to allow maintenance in a single location.</p> <p>The use of vascular anatomy in the CT/MR context group is incomplete – for example there is no code for the lower abdominal artery and its branches, as is typically performed in a peripheral vascular CTA or MRA, or for pulmonary arterial CTA.</p> <p>Some further combined sites (such as pancreatic duct and entire bile duct system) are added, e.g. for X-ray or MR ERCP.</p>

Note: In a prior version of this table, the code T-D1217 was specified for the concept “Maxilla and mandible”. The use of this code conflicts with its assignment to another concept in SNOMED, and its use in this context is deprecated. Although there is minimal possibility of misinterpretation with SOP Instances that may include the deprecated use, receiving applications should be aware of this change; see Annex J.
