<b><u>DCM</u></b>	<b><u>113096</u></b>	<b><u>Creatine+Choline/Citrate Ratio</u></b>

Note: For the purpose of this context group, where possible, the resonance peak in the spectrum corresponding to a particular metabolite is described using the concept from SNOMED for the substance corresponding to the metabolite. E.g. the code used for "lipid" is the code for "lipid (substance)", as this concept is effectively post-coordinated ~~pre-coordinated~~ by its use in the Metabolite Map Code Sequence (0018,9083) to mean "lipid resonance peaks in MR spectroscopy".
